Audit plan preparation date	22-01-2020
Comment	Note: This Audit Plan is tentative subject to change after the Opening Meeting

General & legal compliance requirements

The organization has established the system to monitor and follow the Statutory and Regulatory (legal) and other requirements related to their products and relevant activities and is found to be effective. The major requirements are listed here under.

1.Factory License: License No: 08/2018; Registration No: 104393

2. Consent for Establishment: 391/APPCB/VSP/CFE/RO-VSP/HO/2016, Date: 04/05/2018 valid till: 03/05/2025.

3. Consent for Operation: APPCB/VSP/VSP/391/HO/CFO/2018, date: 21/06/2018, valid till 30/04/2023.Product ranges.

Total 92 Products have approval for Mfg. However the Industry shall produce any 10 products on campaign basis with mx.

Production capacity of 2450 Kgs/day.

4. Form -25 (License to Manufacture for sale (or Distribution) of drugs.

No: 10/VSP/AP/2018/B/G, Date: 23-07-2018. Valid till ; 22/07/2023

1. ABIRATERONE ACETATE, USP/IP, BORTEZOMIB, IP, 2. BUSULFAN, USP/Ph. EuR /IP, CAPACITABINE, USP/Ph.

EuR/IP, DASTINIB, IH, ERLOTINIB HCL, IP, IMATINIB MESYLATE, IP/Ph. Eur, MELPHALAN, USP/Ph. EuR/IP,

NILOTINIB HYDROCHLORIDE HYDRATE, IH, ELTROMBOPAG OLAMINE, POSACONAZOLE, LINAGLIPTIN,

GABAPENTIN, NAPROXEN SODIUM, IOPROMIDE, METOPRLOL SUCCINATE.

2.By Products: Capecitabine, Decitabine, Melphan HCL, Temozolomide, Tenofovir Dsioproxil fumarate, Ritonavir,

Vidagliptn.

5.Fire NOC: 3191A/VSP/MSB/2018

6.Public Liability Insurance: Policy No: 030200001309, date: 25/10/2019 valid till 24/10/2020

7. FSSAI: 10118003000225, Caterer: M/s. Sri Chilukuri Balaji Catering Services.

8. PESO: P/HQ/AP/15/4127 (P392384) DATE: 06/03/2018, Valid 31/12/2022.

9. Bio- Medical Waste: PCB/ROVSP/BMW/HCE-1071/2018, 01/11/2018 valid till 30/09/2023.

Form- Form-IV: for year 2018-19 submitted on 25/06/2019.

Form-V submitted on 27/09/2019.

Form-10. On line submission of Manifest No: 01.

Send to Authorized recycler: CWMP unit-1.

Vehicle No: AP31TW7896.

Waste Description: waste- Process residue, Qty: 1.580, Date: 08/01/2020.

Form-III maintained the same verified.

Quantities as per the date 05/01/2020.as per Form-8

Organic Residue: 11,339, Inorganic residue: 276 and spent carbon: 11,084

Organisation chart is mentioned in attachment 5 of EHS manual.

Environmental Aspect and impact assessment is carried out. Impacts are assessed on the bases of severity, Detection and Probability of occurrence on a scale of 1 to 5 and total score is obtained by multiplying the Severity, Detection and Probability of occurrence and classified as Intolerable 81 or greater, substantial 61-80, moderate 41-60, acceptable 21-40 and negligible 0 to 20. All moderate, substantial and Intolerable environmental impacts are considered as significant. Override conditions such as legal requirements applicability and severity rating 5 are applied to identify the significant impacts. Mechanism of establishing operational controls and setting objectives is identified as the means to reduce the significant impacts as recorded in para 6.3 of EHS manual .

Life cycle assessment for Capacetabine and Metaprolol and record EHSR-01/00, Aspects Identification and Impact evaluation as per the document EHSR-01/00. Solvent transport and storage and their reprocess the same and controls were verified.

Hazard Identification and Risk assessment is carried out. Risks are assessed on the bases of Frequency, Likelihood and Severity on a scale of 1 to 5 and total score is obtained by multiplying the Frequency, Likelihood and Severity and classified as Intolerable 81 or greater, substantial 61-80, moderate 41-60, acceptable 21-40 and negligible 0 to 20. Override conditions such as legal requirements applicability and severity rating 5 are applied to identify the significant risks. All moderate, substantial and Intolerable Risks are considered as significant. Mechanism of establishing operational controls and setting objectives is identified as the means to reduce the significant Risks.

Change Management and Human behaviour considered during HIRA.

Change Control form and Number; CC-18-0108, QA, Initiator QA. and control for the same was verified.

Environmental impact, Hazard Identification and Risk assessment is reviewed once in a year or whenever any technological change or after any emergency /incident.

EHS objectives: (EHSR-19)

1. To provide Fire sprinkler system installation to hazardous , non-hazardous waste storage area – EHSMP – EHS/18/01 target date 25 Feb 2019.
2. To provide Just Rite cans (Jerry Cans) for day solvent storage at laboratories – EHSMP – EHS/18/02 target date 25 Feb 2019.
3. To provide Emergency Control centre in plant with required safety items – EHSMP – EHS/18/03 target date 25 Feb 2019.
4. To provide Filter panel and accessories for breathing air provision at production – EHSMP – EHS/18/04 target date 25 Feb 2019.

Status of the objectives for the EHSMs were verified and PO release status for the same was verified. (60%) completed.

Documented information verified:

1. Granules India Limited EHS Manual EMSM-00, Rev:00 date 01 Aug 2018
2. HIRA EHSR-02 dated 01 Aug 2018 for production block.
3. EHS management programmes EHSR-19

The organization established the objectives at each process level and effectiveness of the objectives were discussed in the Management Reviews.

Management Review

The Organization not received any adverse comments from interested parties.

4 PERFORMANCE TO DATE

Description of System Conformance:

The integrated management system of the organization conforms to the requirements of the standards ISO 14001:2015 and BS OHSAS 18001:2007. Integrated policy, documentation, scope, roles, responsibilities, authorities and accountabilities, objectives, targets and management programmes, mechanism for identification and access to revisions in legal and other requirements are documented and found adequate. The level of conformance of the Occupational Health and Safety Management System was good and meeting the norms defined by the organization. Necessary resources required for effective implementation of the OH&S are provided by the organization. Hazard identification and risk assessment for the activities identified with the participation of EHS Manager, respective process owners and shift in-charges. Ongoing determination of necessary controls to mitigate the significant risk with respect to EMS and OHSAS, compliance to applicable legal and other requirements, conducting mock drills to demonstrate the emergency response preparedness and awareness among the employees are also evidenced with high level of system conformance. The level of conformance of the Environmental Management System was good and meeting the norms defined by the organization. Necessary resources required for effective implementation of the environmental management system are provided by the organization. The organisation has planted the trees in the factory premises. However few deviations noticed with respect to operational controls, identification of environmental aspects and impact assessment and Hazard identification and Risk assessment have resulted into minor non-conformities.

System strengths:

The strength of the organisation can be seen in terms of the comprehensive documentation covering all the Environmental, Occupational Health & Safety management system processes, positive approach & transparency in the working. The Integrated Management System policy, objectives and all the processes have been deployed well throughout the organisation. The Top Management, Management Representative and Staff commitment to the effective implementation of the Environmental, Occupational Health & Safety management system was quite visible. Following positives and strengths of the organisation are evidenced.

1. House keeping and Green Belt coverage
2. Effective corrective action post incident investigation
3. Provision of Proximity sensors a learning from customers experience
4. All process equipment and lines are found above-ground, following international standards.
5. Two systems for fire suppressions – sprinkler and foam.
6. Reduction in manual intervention for sampling.
7. Environmental monitoring/ for clean room parameters monitoring (Qualified to 21CFR part-11 compliance) established.
8. Reactor pressure relief vents are connected with dump tanks and dump tank vents are provided with flame arrestors.
9. Oxygen detectors are installed to detect nitrogen wherever found the nitrogen exposure possibilities.
10. LEL/ VOC detection monitors fixed detectors installed at process area to identify accidental leaks followed by emergency procedure.
11. Automation (fit to the purpose with a logic) mainly facilitating regulatory compliance, Online Data acquisition "EMS/LIMS" AND Isolators for compounding and handling of toxic powder with Negative pressure isolators (-75 Pa to -125 Pa)
12. Isolator for manual API operations in "Closed Isolators.
13. Handling of cytotoxic drugs waste collection in the closed system
14. Detoxification for cytotoxic solid waste and liquid waste before transfer to common effluent system.

Verification of previous nonconformities in Bureau Veritas Certification Stage-2 audit:

14KSMVSS-IN-01: Verified the attached evidences of EHSR-01/00 dated 01/02/2019 and training record and found adequate.

18KSMVSS-IN-02: Verified the attached evidences of record PMCEN-003-00, and training record and found adequate.

18KSMVSS-IN-03: Verified the attached evidences of EHSR-02 dated, 01/02/2019.and training record and found adequate.

14KSMVSS-IN-04: Verified the attached evidences of EHSR-22/00, Rev.1.1, Dated:31/01/2019 and training record and found adequate.

Improvement observed / Useful comparison with the previous audit findings:

Organization has taken appropriate corrective actions against four minor Non-conformities were raised during the previous stage II certification audit

Non conformity number	Non conformity description	Process	Standard	Clause	Grade	Issued Date	Date of Completion	Verification of Corrective action

5 EXECUTIVE AUDIT SUMMARY

5.1 AUDIT CONCLUSIONS

Auditing is based on a sampling process of the available information and the audit methods used were interviews, observations, sampling of activities and review of documentation and records.

Auditing is based on a sampling process of the available information and the audit methods used were interviews, observations, sampling of activities and review of documentation and records.

A 5.5 manday 1st surveillance audit along with upgradation to ISO 45001:2018 was conducted by Mr. G. Satya Gopal as Team leader and Mr.A. Venkata Krishna as Team member at Unit-IV in JNPC, Parawada site from 10th to 13th Feb 2020 including one manday for offsite reporting. The audit was conducted against the requirements of ISO14001:2015 & ISO 45001:2018 standards. The objective of the audit was to determine conformance to the EHS requirements.

Data provided in the application was confirmed in terms of scope and manpower strength etc and the same was found adequate & correct. PEC Codes: E13 and E 35 and SQC code: 08 H have been allotted, same are verified and found adequate.

Audit plan was communicated to the organisation in advance. The audit was started with an opening meeting attended by the Plant Head, Management Representative & all auditees where the audit scope, criteria, methodology, sampling principle & confidentiality clause were explained. The possible outcomes of the audit & the processes of raising nonconformity reports & gradation of nonconformance were also explained. The audit plan was confirmed & communicated at the end of the opening meeting.

Agreed follow-up actions:

During the audit no nonconformity reports were raised. The positive observations as well as opportunities for improvements were shared with the auditees in the closing meeting at respective sites attended by the concerned auditees & the MR. The audit sampling principle & process for closure of non-conformities was also explained. It was informed that all Bureau Veritas Certification auditors are bound by a confidentiality agreement with Bureau Veritas Certification and that any information that we may come across during the audit process will be strictly kept as confidential and not disclosed to any third party without prior consent from the organization. There are no NCR's were reported, Hence the organization can be recommended for continuation of certification to ISO 14001:2015 & ISO 45001:2018 standards.

System Capability and Recommendation:

Satisfactory level of compliance to the requirements of the standard is observed through practices and documentation throughout the Organization. The Top management and all the employees are committed towards implementing the Integrated management system in true spirit and move forward on a continual improvement note. The Organization having adequate resources to meet the customer requirements. The Organization is recommended for Issuing the Certificate of ISO 14001:2015 & ISO 45001:2018

5.2 SUMMARY OF AUDIT FINDINGS

	Major	Minor
N° of Non Conformities recorded	0	0

5.3 MANAGEMENT SYSTEM EFFECTIVENESS

Basic Inputs:

A 5.5 manday 1st surveillance audit along with upgradation to ISO 45001:2018 was conducted by Mr. G. Satya Gopal as Team leader and Mr. A. Venkata Krishna as Team member at Unit-IV in JNPC, Parawada site from 10th to 13th Feb 2020 including one manday for offsite reporting. The audit was conducted against the requirements of ISO 14001:2015 & ISO 45001:2018 standards. The objective of the audit was to determine conformance to the EHS requirements.

Data provided in the application was confirmed in terms of scope and manpower strength etc and the same was found adequate & correct. The employees' strength was verified during audit, it was 80 against CR. PEC & OHSAS Codes: Organization has been listed in PEC13 for EMS and 08H OHSAS. same was verified and found suitable

Organization Profile:

Granules India Limited is a vertically integrated pharmaceutical company, headquartered in Hyderabad, India. They manufacture Active Pharmaceutical Ingredients (APIs), Pharmaceutical Formulation Intermediates (PFIs) and Finished Dosages (FDs), distributed to quality conscious customers in both regulated and semi-regulated markets. They are dedicated to excellence in manufacturing, quality and customer service. Granules India Limited has manufacturing sites (API & SOD) approved for the manufacture, labeling and secondary packaging by multiple regulatory authorities. Granules India Limited has eight manufacturing units spread across the globe. Granules India Limited has established a new manufacturing facility, Unit-V at Visakhapatnam, Andhra Pradesh, India for manufacturing of API and SOD products

Client Location:

Granules India Limited- Unit-V: Plot No. 30, Jawaharlal Nehru Phamacity, Paravada Mandal, Visakhapatnam-531019, Andhra Pradesh, India.

Description of Process:

1. Production Department:

The Production function at granules is managed by turning inputs into finished outputs through a series of production processes. The Production HOD is responsible for making sure that raw materials are provided and made into finished goods effectively. He must make sure that work is carried out smoothly, he must supervise procedures for making work more efficient, more enjoyable and maintain incident free environment with hygiene standards.

2. Quality Department:

The quality function at Granules is managed by highly qualified professionals with diverse experience in working with leading agencies across the globe (U.S., Canada, EU, Latam, BRIC and Asia Pacific countries, among others), continual improvement processes, problem solving and total quality management tools and techniques. Sampling, Inspection and testing of incoming raw materials are carried out by the QCA function. Besides the above, the other objectives of the QCA function to ensure that the incoming materials comply with the defined / required specifications. Whenever incoming material's specifications deviate from the acceptable criteria, the materials are rejected. Monitoring supplier's performance on quality issue. Establishes, coordinates, and monitors the laboratory quality assurance program; Works closely with Executive to plan, schedule, and implement QA related activities. Review of the design, specifications, drawings and specified standards to assure compliance to the applicable regulatory requirements. Deviations from specifications, if any, are promptly brought to the notice of the concerned personnel and corrective actions are initiated as appropriate. QCA function of GIL-Unit-IV is also responsible for ensuring that the finished products comply with the defined quality specifications as per commitment in the purchase orders. Assistance to the purchaser in cases where corrective action is needed due to non-conformity. Handling Quality related customer's complaints. Complaints about marketed products are examined; the causes of quality defects investigated, and appropriate measures taken in respect of the defective products to prevent recurrence. Final

authority for clearance of finished goods for dispatch is vested with the QCA function. Develops and presents training program for laboratory and field staff; develops training protocols, competency standards, and documentation requirements.

3.Engineering Department:

Utilities: Providing the service to the production, operation & maintenance of the equipment's as per process requirement and within the manufacturer recommendations. Utility department is responsible to design/select the utility equipment based on end user requirements. It is responsible to finalization the specification, drawings, installation & commissioning activities of utility equipment's as per the end user & manufacturer recommendation. Chilled brine, Chilled water, Cooling water, Nitrogen gas, Compressed air/Instrument air, Breathing air, RO water, Process water, raw water, Drinking water, Steam and Hot Oil are considered as utilities. Department main objective is pre designed and uninterrupted utilities supply to end user to meet their requirements / targets. Main activities include Installation & commissioning of all utility equipment's with the co-ordination of projects dept. Monitoring the equipment's performance through log record. To carry out the preventive maintenance for all the equipment's as per the schedule. Attend the breakdowns when ever comes. Planning of shutdown maintenance with co-ordination of end user department. Prepare the monthly reports & send to Director - Technical. Evaluation of utilities supplies performance through trend analysis / analysis reports. Co-ordinate to C&I dep't for instruments calibration. Plan & do the Annual maintenance contract and out sourced analysis where ever required. Maintaining of water levels up to ¾th level. Eliminate / Minimize the Hazardous waste. Minimize the Hazards through risk evaluation / through employees training. Improve the life of the equipment's and minimize the breakdown time. Investigate and rectify the re-occurrence / repeated problems. Minimize the impacts on environment by evaluation of aspects / through employees training. Spare parts & inventory maintenance. Identify & finalize the list of outsourced process.

Mechanical: Maintenance of process equipment / systems as per process requirement within the manufacturer recommendations. Plan equipment maintenance as per schedule and at regular intervals in order to improve the life of machinery and avoid breakdown of equipment. Plan spares for reducing breakdown time of equipment i.e..Available for production. Repair valves, pumps and other equipment to reduce the capital cost. Department main objective is to provide an uninterrupted service to end user department. Main activities include: Tests, replacements, adjustments and repairs of equipment are intended to retain / restore a functional unit in or to a specified state in which the unit can perform its required functions. Plan for achieving the targeted date, spares, and scheduled maintenance. Anticipation of future work. Build technical knowledge of maintenance personnel through internal / external trainings. Record the works done for the machine. Investigate and rectify the re-occurrence / repeated problems. Prepare monthly reports and send to Director - Technical. Improve the life of equipment and minimize the breakdown time. Complaints and requests are taken from production personnel on basis of difficulties experienced by them while operating the equipment. Examination for the state of various parts of the machine during their life span. Minimize the hazards through risk evaluation and through employees training. Minimize the impacts on environment by evaluation of aspects and through employees training. Spare parts and inventory maintenance.

Electrical: Electrical department is responsible to select the electrical equipment based on User requirements. It is responsible to finalization of the specifications, drawings, installation, commissioning & maintenance activities of electrical equipment as per the recommendations. E.g.: Transformers, Generators, PCC, MCC's, Switchgear, Motors and VFD's and etc., are considered as electrical equipments. Department main objective is pre-designed and un-interrupted power supply to user to meet their requirements / targets. Main activities include providing continuous supply to all departments without any disturbance to production. Ensuring that machines do not suffer breakdowns due to short circuits or other such problems. Planning installation and execution of backup power units in case of power failure. Providing troubleshooting solutions to different departments in case of electrical problems. Repairing breakdown machines quickly so that work is not hampered for long time. Ensuring that workers follow standard safety precautions while undertaking installation and maintenance works.

Controls & Instrumentation: Control and Instrumentation Department is responsible for designing, developing, installing, managing and/or maintaining Instruments & Equipments which is used to monitor and control engineering systems, machinery and processes. Thorough understanding of the operational processes of an organization and have a truly multidisciplinary role, working closely with colleagues across a number of functions, including operations, purchasing and design. The main objective is to ensure that these systems and processes operate effectively,

efficiently and safely. Main activities include: Designing & Developing of Safety and Process Interlocks as per PSRA. Implementing the DCS in our plant. Laying of Cables, Cable Trays, Panel/JB Wiring for New Projects. Installation, Commissioning, Configuration & Calibration of all Field Instruments. Troubleshooting and Problem-Solving of Control & Field Instruments. Maintenance of Field Instruments as per the Schedule. Understanding and ensuring compliance with the Health & Safety regulations and quality standards of the organization. Technical Coordination with DCS, PLC & Field Instrument Vendors. Maintenance of Field Instruments at Boiler, VAM, Utility chillers, RO, Air and N2 Plants & ETP. Maintenance of Edwards Dry Vacuum Pumps. Records of calibration and verification results are maintained in accordance with SOPs. Manage and Deliver Multiple Projects concurrently.

4. HR and Administration Department:

Main activities include: Manpower planning, Talent Acquisition, Talent Retention, Employee engagement practices, Employee Relations & Industrial Relations, Performance Management System, Training & Development Rewards & Recognition, Job Rotation & Career Enrichment, Salary & Wage administration, Leave Management System, Statutory Compliance, Employee Separation & Full and Final settlement. General Administration, Security, Employee Transportation, Employee Insurances, Support to Public Relations, Support to Liaison, Support to Corporate Social Responsibility, Canteen and other Welfare activities, Guest House Management, Occupational Health Centre, Statutory requirement and Housekeeping.

5. Ware House & Logistics

Ware house & Logistics department is responsible for procurement and receipt of all the materials against purchase orders issued in the name of Granules unit-IV. Main activities include: Documents verification against PO. HOD will instruct the executive to check the documents and Instructions will be given to security to take the Lorry/truck/Trailer/Tanker by updating Gate inward register and take prescribed safety measurement and allow the vehicle inside (Ware House) and unloading at respective unload areas. Verifying goods, place, label, color code (Normal stocks, Promotional stocks, Special customer stocks like CSD, Price changes, Batch etc). Generate Material Inspection Report and forward to QC for sampling, analysis, Approved/Rejected. Generate Goods Receipt note in SAP. Segregation of Goods basing on Chemical compatibility, materials will be stored in appropriate storage area. Finished Goods Material will be sorted in appropriate storage area for with easy accessibility. As per Production Block Raw & Packing Material requisition materials shifted to production with proper Issue Tag as per FIFO. Materials will be shifted to production blocks with the help of Fork Lift, Hydraulic trolley, and Tractor. As per the Production Block requirement Raw & Packing Material requisition and solvents transfer from dedicated bulk storage tank to production day tanks. Procurement of packing materials, raw materials and other spares is carried out from approved suppliers. outsourced processes such as Calibration of master standards, environmental performance monitoring, fire extinguishers testing, pressure vessels & Lifting tackles testing are controlled. Performance evaluation of these external services providers including suppliers and sub-contractors is carried out accordingly.

6. EHS Department

Environmental Department: Environment Department providing the service to the production and to receive, transfer, handling, treatment, storage and disposal of HTDS, LTDS Effluents, hazardous wastes in proper manner. Effluents segregation at the source of generation and sent to respective treatment systems. Hazardous waste collection, handling, storage, treatment and disposal to respective treatment systems (Incinerator / Co processing system) and Eliminate / Minimize the Hazardous waste Preparing CFO and CFE applications for submission in APPCB office and obtain CFO and CFE renewals. Coordinating with Production department for effluents receiving, Hazardous wastes handling and disposal. Coordinating with accounts & Finance departments for timely release of payment to the parties. Sampling, Inspection and testing of offsite waste disposal facilities are carried out by the Environmental department Review of the design, specifications, drawings and specified standards to assure compliance to the applicable regulatory requirements. Deviations from specifications, if any, are promptly brought to the notice of the concerned personnel and corrective actions are initiated as appropriate. Upholds safety, health, environmental procedures, communicates directly and supports the Safety department to ensure the compliance at all times. Lead and document the aspect /hazard evaluations of each phase of a large project (such as a new process). Assist in developing inspection, test, and preventive maintenance plans and equipment reliability programs. Participate on teams responsible for implementing new products and processes without environmental impacts. Handling Environmental related complaints and investigation and resolve To Conduct the Environmental audit in every year by external authorized agencies Prepare the monthly reports & send to Director - Technical.

7.Safety: To guide, educate, train and motivate all levels of Management, Contractors and the workforce in the techniques of risk reduction, accident prevention, occupational hygiene and environmental control. To advise on all aspects of safety and to coordinate safety, health and environmental activities in their area of responsibility, in an on-going effort to reduce risk to an acceptable level in order to prevent injury and illness to employees, damage to property, and environmental harm. Mainly responsible for All plant activities are undertaken in a safe manner. The plant complies with the requirements of the Health and Safety at Work Act and other relevant legislation. Test, and document deviations of critical systems, Examples include: Lock - out, tag - out procedures, Work Permit, Permits (confined space, hot work ... etc.), Lifting gear, Fall protection, Contractor's control, Work environmental control measures. Provides expert advice on safety matters to the plant Identify hazards, which have potential to cause incidents and Incident investigation. Inspect the work place, including any article, substance, plant, machinery or health and safety equipment at that work places with a view to the health and safety of the employees.The training of Supervisors is high on the list of duties of Safety personnel and it is through the Supervisors that safety has to be spread. Conducting the safety committee meeting conducting mock drills, Ensure that all the employee wear PPE's while doing activities in the plant. Organizing the safety promotional activities, assist in motivating Employees to work safer.Coordinating to conducting the third party inspections and audits. Implementation of safety suggestion system.

SCOPE OF CERTIFICATION AS RECOMMENDED: Following scope of certification has been recommended after the documentation review and site visit:

"Manufacturing and Supply of Active Pharmaceutical Ingredients (API'S), Bulk Drug Intermediates and Formulations"

Validation of Scope:

The organization is provided with necessary infrastructure, other facilities and competent personnel to establish , document , implement, maintain and continually improve the performance of the Integrated management system. Risks and Opportunities w.r.t Environmental Management systems, Environmental aspects/OH&S hazards are established. Applicable Environment /OH&S related legal and other requirements are complied with and suitable authorisations obtained which are found within validity. The compliances to consent conditions and evaluation records of compliances to legal and other requirements Verified and given below.

The organization has established the system to monitor and follow the Statutory and Regulatory (legal) and other requirements related to their products and relevant activities and is found to be effective. The major requirements are listed here under.

- 1.Factory License: License No: 08/2018; Registration No: 104393
2. Consent for Establishment: 391/APPCB/VSP/CFE/RO-VSP/HO/2016, Date: 04/05/2018 valid till: 03/05/2025.
3. Consent for Operation: APPCB/VSP/VSP/391/HO/CFO/2018, date: 21/06/2018, valid till 30/04/2023.Product ranges. Total 92 Products have approval for Mfg. However the Industry shall produce any 10 products on campaign basis with mx. Production capacity of 2450 Kgs/day.
4. Form -25 (License to Manufacture for sale (or Distribution) of drugs.
No: 10/VSP/AP/2018/B/G, Date: 23-07-2018. Valid till ; 22/07/2023
1. ABIRATERONE ACETATE, USP/IP, BORTEZOMIB, IP, 2. BUSULFAN, USP/Ph. EuR /IP, CAPACITABINE, USP/Ph. EuR/IP, DASTINIB, IH, ERLOTINIB HCL, IP, IMATINIB MESYLATE, IP/Ph. Eur, MELPHALAN, USP/Ph. EuR/IP, NILOTINIB HYDROCHLORIDE HYDRATE, IH, ELTROMBOPAG OLAMINE, POSACONAZOLE, LINAGLIPTIN, GABAPENTIN, NAPROXEN SODIUM, IOPROMIDE, METOPROLOL SUCCINATE.
- 2.By Products: Capecitabine, Decitabine, Melphan HCL, Temozolomide, Tenofovir Dsioproxil fumarate, Ritonavir, Vidagliptn.
- 5.Fire NOC: 3191A/VSP/MSB/2018
- 6.Public Liability Insurance: Policy No: 030200001309, date: 25/10/2019 valid till 24/10/2020
7. FSSAI: 10118003000225, Caterer: M/s. Sri Chilukuri Balaji Catering Services.
8. PESO: P/HQ/AP/15/4127 (P392384) DATE: 06/03/2018, Valid 31/12/2022.
9. Bio- Medical Waste: PCB/ROVSP/BMW/HCE-1071/2018, 01/11/2018 valid till 30/09/2023.

Achievement of Policy Commitment:

IMS Policy describes about commitment to provide health and safe workplace, prevent ill health and injuries, protection of environment, waste minimization through energy efficient operations, conservation of natural resources, manufacture and delivery quality products, comply to all compliance obligations, improve practices, processes and products throughout the product life cycle and establish HSEQ objectives for improvement, Enhance HSEQ awareness among employees and contractors, measure HSE performance of employees and as well as organization growth, deploy resources and capital to meet commitments, communicate policy to relevant interested parties. IMS Policy is reviewed during management review to ensure continuing suitability.

IMS Policy is displayed at main entrance for communication with interested parties and by training to employees and contract workers.

Description of System Conformance:

The integrated management system of the organization conforms to the requirements of the standards ISO 14001:2015 and BS OHSAS 18001:2007. Integrated policy, documentation, scope, roles, responsibilities, authorities and accountabilities, objectives, targets and management programmes, mechanism for identification and access to revisions in legal and other requirements are documented and found adequate. The level of conformance of the Occupational Health and Safety Management System was good and meeting the norms defined by the organization. Necessary resources required for effective implementation of the OH&S are provided by the organization. Hazard identification and risk assessment for the activities identified with the participation of EHS Manager, respective process owners and shift in-charges. Ongoing determination of necessary controls to mitigate the significant risk with respect to EMS and OHSAS, compliance to applicable legal and other requirements, conducting mock drills to demonstrate the emergency response preparedness and awareness among the employees are also evidenced with high level of system conformance. The level of conformance of the Environmental Management System was good and meeting the norms defined by the organization. Necessary resources required for effective implementation of the environmental management system are provided by the organization. The organisation has planted the trees in the factory premises. However few deviations noticed with respect to operational controls, identification of environmental aspects and impact assessment and Hazard identification and Risk assessment have resulted into minor non-conformities.

System strengths:

The strength of the organisation can be seen in terms of the comprehensive documentation covering all the Environmental, Occupational Health & Safety management system processes, positive approach & transparency in the working. The Integrated Management System policy, objectives and all the processes have been deployed well throughout the organisation. The Top Management, Management Representative and Staff commitment to the effective implementation of the Environmental, Occupational Health & Safety management system was quite visible. Following positives are strengths of the organisation are evidenced.

1. House keeping and Green Belt coverage
2. Effective corrective action post incident investigation
3. Provision of Proximity sensors a learning from customers experience
4. All process equipment and lines are found above-ground, following international standards.
5. Two systems for fire suppressions – sprinkler and foam.
6. Reduction in manual intervention for sampling.
7. Environmental monitoring/ for clean room parameters monitoring (Qualified to 21CFR part-11 compliance) established.
8. Reactor pressure relief vents are connected with dump tanks and dump tank vents are provided with flame arrestors.
9. Oxygen detectors are installed to detect nitrogen wherever found the nitrogen exposure possibilities.
10. LEL/ VOC detection monitors fixed detectors installed at process area to identify accidental leaks followed by emergency procedure.
11. Automation (fit to the purpose with a logic) mainly facilitating regulatory compliance, Online Data acquisition "EMS/LIMS" AND Isolators for compounding and handling of toxic powder with Negative pressure isolators (-75 Pa to -125 Pa)

12. Isolator for manual API operations in "Closed Isolators.
13. Handling of cytotoxic drugs waste collection in the closed system
14. Detoxification for cytotoxic solid waste and liquid waste before transfer to common effluent system.

Verification of previous nonconformities in Bureau Veritas Certification Stage-2 audit:

14KSMVSS-IN-01: Verified the attached evidences of EHSR-01/00 dated 01/02/2019 and training record and found adequate.

18KSMVSS-IN-02: Verified the attached evidences of record PMCEN-003-00, and training record and found adequate.

18KSMVSS-IN-03: Verified the attached evidences of EHSR-02 dated, 01/02/2019 and training record and found adequate.

14KSMVSS-IN-04: Verified the attached evidences of EHSR-22/00, Rev.1.1, Dated:31/01/2019 and training record and found adequate.

Improvement observed / Useful comparison with the previous audit findings:

Organization has taken appropriate corrective actions against four minor Non-conformities were raised during the previous stage II certification audit

Evaluation of compliance to legal/other requirements :

The organization has furnished all the legal requirements like Consent for operation, Establishment and its relevant records including factory license which are found to be valid. Identification of Legal and other requirements is done through the sources such as websites, authorities and by consultants and compliance is evaluated once in 6 months.

External Communication:

No adverse communication reported within the system. No complaints received from interested parties against the requirements of Environmental, Occupational Health & Safety management system. Organization has established a system to handle and resolve the customer complaints as and when received.

Mechanism of consultation and participation:

The procedure for hazard identification and risk assessment is established with the involvement of the employees, contract workmen and supervisors including incident investigation. Employees and sub contract workmen and supervisors were made to participate in the safety meetings and their suggestions are being captured. The effectiveness of the established procedure for consultation and participation of employees at lower level is seen through interaction with the Employees during the audit of Boiler - Mechanical, Electrical & Instrumentation process

Effectiveness of system in night shift working (Second and third shift)

Effectiveness of system implementation in second shift was found to meet the requirements. Verified through internal audit, periodic checkings, log book records, ambient air and stack monitoring, effluent treatment, plant records, noise monitoring, competent persons in control of safe operating procedures. To Cover the second shift operations, audit team conducted the audit on 11-02-2020 from 13:30 hrs to 22:00 hrs and 12-02-2020 from 08:00 AM to 11:30 AM

Uncertainty / obstacles that could affect the reliability of audit conclusions:

During the audit the Auditees were conversant with their Integrated Management System of EMS / OHSAS and could explain the IMS Policy and its deployment in the organization.

Unresolved diverging opinions between the audit team & Auditee:

There were no unresolved diverging opinions between the audit team & Auditee.

Use of logo:

The Guidelines regarding use of Bureau Veritas Certification logo was explained to the top management, management representative and all the process owners during the closing meeting.

Agreed follow-up actions:

During the audit no nonconformity reports were raised. The positive observations as well as opportunities for

improvements were shared with the auditees in the closing meeting at respective sites attended by the concerned auditees & the MR. The audit sampling principle & process for closure of non-conformities was also explained. It was informed that all Bureau Veritas Certification auditors are bound by a confidentiality agreement with Bureau Veritas Certification and that any information that we may come across during the audit process will be strictly kept as confidential and not disclosed to any third party without prior consent from the organization. There are no NCR's were reported, Hence the organization can be recommended for continuation of certification to ISO 14001:2015 & ISO 45001:2018 standards.

System Capability and Recommendation:

Satisfactory level of compliance to the requirements of the standard is observed through practices and documentation throughout the Organization. The Top management and all the employees are committed towards implementing the Integrated management system in true spirit and move forward on a continual improvement note. The Organization having adequate resources to meet the customer requirements. The Organization is recommended for Issuing the Certificate of ISO 14001:2015 & ISO 45001:2018

10 Certificate information

10.1 ISO 45001:2018 - UKAS - EN

Certificate information

Site Name	GRANULES INDIA LTD - AP
Address	Plot No. 30, Jawaharlal Nehru Phamacity,Paravada Mandal
City	Visakhapatnam
Postal Code	531019
County/State	AP
Country	India
Scope	MANUFACTURING AND SUPPLY OF ACTIVE PHARMACEUTICAL INGREDIENTS(API), BULK DRUG INTERMEDIATES AND FORMULATIONS
Number of certificates	1

10.2 ISO 14001:2015 - UKAS - EN

Certificate information
